

Vladyslav Z.

Senior Front-End Developer

With over 5 years of experience in web development, I have been involved in creating web applications that cater to a variety of user needs. Using my experience in technologies such as Vue.js and Nuxt.js, I have designed responsive interfaces, implemented complex functionality, and optimized performance to deliver exceptional user experiences.

My goal is to contribute to innovative projects that challenge me and allow me to make a meaningful impact in the field of web development.

I have experience as a senior/lead developer: - mentoring junior employees - suggesting the most suitable technical solutions.

Experience:

—— Senior Frontend Developer at Avada Media, Ukraine

March 2019 – present

Project: Social network

- Developed the user interface using Vue.js and Nuxt.js ensuring high performance and responsiveness.
- Implemented functionality for user interaction, including reviews, ratings and comments.
- Optimized data loading and page rendering, improving speed and user experience.

Project: CRM system

- Created an interface for managing orders and logistics processes, providing convenient and intuitive navigation.
- Implemented responsive design to support different devices and screens.
- Used websockets to update data in real time, improving the speed and accuracy of information

Project: CRM system

- Participated in the design and implementation of the system architecture.
- Implemented static code analysis tools to maintain code cleanliness.
